CLOUD REMOTE DESKTOP SERVICES

What are Remote Desktop Services?

Terminal Server or Remote Desktop Services provides a remarkable remote access to a Microsoft® Windows® desktop via a "thin client" software that allows the client user to operate the remote system as if they're sitting in front of it. Now you are able to click, type, and interact, just like your normal PC or Mac desktop.

Work Remotely As If Working Locally

Databerry Remote Desktop offers you the freedom to work remotely from any remote PC. You are able to see its screen at the real time and all your mouse movements and key presses are transmitted to the remote PC, and responds as if you were there!

More Features. Less Costs

Our innovative, robust feature set and low prices have made the Databerry Remote Desktop platform the BEST. Depending on selected edition and number of managed remote PC's, the price per PC costs anywhere from as low as \$1 to \$7. Other providers charge as much as \$50!

Control & Communicate Remotely

We believe that when providing remote support, it is crucial that both the supporter and the supportee communicate well. Databerry Remote Desktop allows you to asynchronously chat back and forth with the connected user, in addition to interacting with their desktop.

Share Access With Multiple Users

No restrictions! Unlike a generalized Windows Remote Desktop connection, our connection allows you to establish multiple, active connections with the remote PC.

Blindingly Fast, Secure Connection

Speed is the key! Optimized and encrypted, our advanced data algorithm allows your connection screen to update 10 times a second. This full-screen, responsive connection makes you forget that you're working remotely.

Capture & Record Remote Sessions

Discreetly monitor and record remote connection activity without notification to the remotely connected client. Includes the ability to capture both images and video.

Undeniable Perks

- + No Downtime
- + No Administration Required
- + Easy Setup
- + Scales Easily To Match Growth
- + Lowers Monthly Operating Costs
- + Automatic Backups
- + Share Files, Printers and Resources Easily
- + Securely Connect From Anywhere

DATABERRY

TANGIBLE, INSTANTANEOUS BENEFITS

How can it benefit my organization?

- More cost-effective than local workstations
- Easily administrate all users' installed applications
- Access to company resources (Files, Folders, Applications, Databases)
- Local hardware failure-independent
- Enhanced security
- Increased mobility (compatible with all mobile devices)
- No need to upgrade local hardware
- Scalable and redundant

The Windows Server - Terminal Services platform gives organizations the flexibility to centrally deploy applications to users, regardless of their location. It can help breathe new life into legacy desktops, and helps enable branch-office access to feature-rich applications, and files using lower bandwidth.

Enhanced productivity throughout your organization

- Secure, centralized application & file hosting
- Reduced application costs and management time
- Efficient deployment of core applications and resources

More Secure

- High-level encryption (HIPAA, PCI, ISO compliance etc.)
- Complete control of log-on attempts and connection time
- User and server-level security and policy management
- Desktop lock-down capabilities
- Full software restriction and control capabilities

Extremely efficient, cost-effective application management

- Offer help desk support the amazing ability to provide remote troubleshooting
- Automated and dynamic administration tasks
- Great performance computing capabilities from lower bandwidth remote workstations
